This is a decision log. It is not an automated render score or a ranking prediction.
Rows 1-5 are fictional examples (.example domains). Replace them with your own findings.
Lanes: INDEX (search crawler, renders) | LIVE-FETCH (assistant fetching a URL) | TRAINING (corpus collection)
Decisions: OK, MONITOR, INVESTIGATE, SERVER-RENDER, FIX-SIGNAL, FIX-DELIVERY, DEPRIORITISE

URL / template	Lane affected	Test rung (1-6)	In raw HTML?	In rendered DOM?	Element	What differs	Decision	Owner	Retest date
/services/* (cloud migration)	LIVE-FETCH	2 — browser parity	No	Yes	Main body copy	24 words served, 984 after render. Entire service description client-injected.	SERVER-RENDER	Front-end lead	2026-11-18
/products/model-a	INDEX	4 — template parity	Yes (noindex)	No (noindex removed)	Robots directive	Raw HTML ships noindex; client script removes it on load.	FIX-SIGNAL	Platform team	2026-10-28
/products/model-b	INDEX	4 — template parity	Yes	Yes, different value	Canonical	Raw canonical is self-referencing; rendered canonical points to the parent category.	FIX-SIGNAL	Front-end lead	2026-11-04
/blog/*	INDEX	2 — browser parity	Yes	Yes	Body copy	12-word difference, all of it a cookie banner.	OK	SEO analyst	2027-01-20
/locations/chennai	LIVE-FETCH	5 — retrieval observation	No	Yes	Address and opening hours	Assistant returned navigation text only when given the URL directly.	INVESTIGATE	SEO analyst	2026-11-10
